- Version 7.2.6.1483 was released to Beta sites on 30/10/2012 = bug fixes
- Version 7.2.6.1529 was released to Beta sites on 16/12/2012
- **Version 7.2.6.1537 was released to all sites on 06/01/2013**
- **Version 7.2.6.1553 was released to all sites on 24/01/2013**
- Version 7.2.6.1565 was released to Beta sites on 04/03/2013
- **Version 7.2.6.1565 was released to all sites on 20/03/2013**

Changes since main release of 1553 which was release on 24/01/2013

1. Windows 8 – Health one now works with windows 8 –beta testing
2. Family Circle – small bug fixed
   Change family member's address using the admin form now asks if you want to change all family member details
   Telephone Mobile is displayed in Family tab
3. Drug Module changes – requests by Helix for Servier
   Updated Acerycal message
   New Diamicron 60mg message
4. Promed External Devices
   Customed GDT Devices – a) ECG   b) ABPM   c) Holter   D) Spiro
5. Savience Web Repeat prescription ordering. Some small changes
   In the DXM message GP Should be able to edit "no repeats"
   In the DXM message the date of the prescription transaction should be today's date
   Remove auto plan of action = "reading – drig prescription"
6. Cancer referrals (1553)
   4.1 An editable contact number field has been added to the Euromedic form
      a. This field is populated with the 'telephone' H1 item or with the 'telephone mobile' item if no telephone item exists.
      b. It can be edited, but the modifications will not be written back to the HCR.
   4.2 The patient medication selector, accessible from the Healthlink referrals, now contains all active meds.
   4.3 Multiple H1 items can now be configured to auto-populate Healthlink referral fields.
      a. The attached spreadsheet details which field can be configured, their default configuration and how they are populated i.e. active transaction only, last occurrence or all occurrences.
   4.4 An issue was resolved where if a hospital has multiple departments, the first department in the list was always sent to Healthlink even if another department was selected.

1537

- **Irish Primary Care research Network** – **(iPCRN)** Audit of diabetes set to server 1488
  See the document %PCRN_UserGuide.doc+
- **Admin data entry using a form**– tools/options/general/other ➔ Edit all admin data using common dialogue
  See the document "FAMILY CIRCLES.doc"
- **Family Circle** – Menu item "view" /analysis grids/family (with HCR open) adds family tab to views on top left of HCR
  See the document " Admin_DataForm.doc "
- **Lock a Patient file from viewing by defined users**
  This allows the Health one Administrator to block one or more users from viewing a particular patient record. See the document "LockPatient File.doc"
- **New COPD Mediform –** "COPD_MMRC.frm"
  This, we think, is an improvement on the original COPD mediform
- **Flu Search for sentinel practices –** automated now **1511**
  See the document "FLU_Surveillance_2013.doc"
- **Query Plus analyses – some improvements**
  a) Search by disease flag
  b) Search for multiple Health one codes (as well as ICPC/ICD codes) in the same row
  c) Search Drugs by ATC code (not new but many do not know it exists)

- **Cancer referrals and other referral forms**
  a) **Cancer referral –** improved layout – can extract lab and radiology
  b) **General referral –** Improved layout
  c) **Euromedic referral -** **new – now live**
  d) **Palliative care referral -** For Pilot project –print only
  All of these referral forms are available after you enable them in tools options

- **Drug Module**
  a) **Pradaxa -** When prescribing Dabitagan displays a form for PCRS reimbursement
  b) **Personal notes -** Can be displayed to the right of the main drug edit screen. This can be set in tools options. Note the personal notes are notes written by the doctor and are information for the doctor and have nothing to do with the patient.
- Quick_ templates execute and save with quick short cut = Ctrl_F2
- Vaccine batch numbers search now available in Built in analyses
- **Web link** - to HIUG Web site and

Bugs fixed

1. Using the back space in a column in Quicklet (didn't work)
2. The "dosage" option for displaying free text dosage in templates went missing for a while
3. Query plus include/exclude GMS now works
