

Version 7.2.6.1606 - 03/07/2013

We have released a new version today = 7.2.6.1606. This has a few small changes in response to feedback.

Please make sure **all PCs in the practice are upgraded to this version.**

1. Plan of Action bug - If you create an action plan from the DXM result, the action plan attribute "status" is a ? (should be "requested").
The action plan does not then appear in the main list of action plans under the action plan tab. **FIXED**
2. Drug Module – "remaining repeats" if changed to zero in Repeats window to zero if defaulted to 99 – **FIXED**
3. Promed – Customised devices – Small improvement taking care of practices that have both XP and windows 7 on site.
