Are you fed up having to go through the patient chart to see if this over 65 patient needs to have a pneumonia vaccine, would you like to have an alert like this come up when you open the file to tell you it should be given?

Alert list	
Alerts fired from the current HCR	2
Pneumona Vaccine	۵
Needs Pheumonia vaccine	

Then read on. Warning however, nerd material ahead, good knowledge of Health One required.

It is set up in the configuration tool and should look like this.

*	A	ert	list
	-	C.L.	

This form helps you to manage all alerts that can be fired in HEALTH one

Alerta										
[Name	Analysis	Mexsage	Triggera	Enabled	Fatient pategory	Sek	A <u>c</u> e min	Age max
		^o neumona /accine		Needs Pheumon a vaccine	Loading		V	All	65 Yea (*)	100 Year(s)
- [

The edit screen of the alert should look like this

Edit Alert			X
Editing alert "Pneumon	a Vaccine"		
Ena <u>b</u> led :			
Name: Pneu	imona Vaccine		
Analysis			
Patient Category		Sex: All	-
Age between	65 🚔 🛛 Year(s)	💌 and 🛛 100 荣 Year(s)	-
Test patients	•	GMS	•
Flag			•
<u>A</u> nalysis :	Pneumovac		
Checked = Trigger if the analysis			
gives a result			
,	+- 🗈 /	Operator: 💽 and 🔿 or	
T <u>r</u> iggers :		-

When HEALTH one sta	arts		
<u>F</u> rench <u>D</u> utch Engli <u>s</u> h]		
Needs Pneumonia vaccir)e		<u>^</u>
<u> </u>			Ŧ
		<u> </u>	<u>C</u> ancel

The pneumovac search referred to has to be in the HCR analysis and as its not currently a standard one you will have to write it your self. To do this in Health One with a patient file open create a HCR analysis like this

HCR Anal	ysis Editor, Preumovac			
Nage	Preunovac		Save	tion .
HCR Analysis	Formula			
Do Ners Name -	vaccine)And[ties: Content = preumonia[Dif[ties: Content = pre	sunococcus [V][Di[Item.Content = preumococcul preumonia]Di[Item.Content = preumo]

		Close

Brief instructions I know and you need to have prior knowledge of how to set these types of things up but very useful if you can.
